

# 100% Electric Launch PORZIG

## Technical specifications

Overall length: 6.5m  
Overall width: 2.2m  
Draft: 1.3 m  
Structure: Aluminum H111 5083  
Light displacement: 1 t  
Payload capacity: 500 kg  
Propulsion: Outboard Hyg Motors  
Power: 6 kW or 14 kW  
Capacities: up to 26 kWh  
Regulation: Division 222 or ES-TRIN  
Solar panels: 3m<sup>2</sup>

### The use

- Port surveillance
- Ship services
- Various works
- Tourist visits
- Boat licenses
- Sailing school

## The electric versatility

Nicknamed "Porzig," or "Little Port" in Breton, this launch offers unparalleled versatility while preserving the environment with its 100% electric propulsion. A practical, silent, and respectful solution. Without compromising performance, this maritime experience combines modern technology with respect for nature, opening new paths towards a more sustainable sea adventure.

The Porzig lineup is customizable and adaptable to all needs. Contact us for a personalized quote

# Made in France

Our product is entirely manufactured in France. From design to construction, every step is carefully planned, designed, and executed locally.

## Solar autonomy

The 3m<sup>2</sup> of solar panels directly power the batteries, providing extended autonomy for partially or fully self-sufficient navigation at sea.

## Electric RIM thruster

Extremely maneuverable and lightweight, this thruster develops concentrated power on thrust. Particularly optimized, its efficiency of 90% allows it to replace thermal motors of 20HP for the 6kW and 50HP for the 14kW.

- Its carbon marine nozzle houses an innovative propulsion system and provides natural safety for users.
- The motor's design, without a central shaft, prevents algae and other debris from disrupting propulsion while optimizing flow.
- Particularly quiet, oil-free, and seal-less, Hyg Motors thrusters allow you to navigate rivers and seas serenely.
